Energy Investment Solutions

Welcome to GE Capital Global Energy's Energy Investment Solutions (EIS) Home page. We have designed this tool to let you quickly determine which financial products will be most useful to you.

During the two step evaluation process you will be asked to answer a few simple questions. Based on your response, EIS will direct you to a relevant financial tool or structure. You will always be able to go back or contact us with any questions.

Click here to use our Energy Investment Solutions tool.

If you are already familiar with GE Capital Global Energy's products and would like more information on a specific product, please select a product from our list:

GE Capital
Global Energy

Energy Investment Solutions

The Selected Product is:

Project Finance

GE Capital Global Energy assists clients to achieve specific finance and accounting objectives in a tax efficient manner through the creation of non-recourse, asset based equity and debt investments supported by supply and off-take contracts.

We apply project finance techniques to finance the acquisition or ownership of energy assets. Structures are customized to the specific asset or assets under question.

Partnerships, leases, common and preferred equity structures can be applied to customize efficient project financings which typically are off-balance sheet for our clients.

In certain circumstances, and depending in part on the client's tax profile, a project financing may result in the client achieving a lower financing rate than its alternative borrowing rate.

The client may be concerned about credit implications and/or S&P or Moody's debt ratings and is therefore interested in off-balance sheet accounting treatment to improve leverage and ROA.

Project finance may allow the client to achieve greater leverage and/or term than is otherwise available or reduce impact of restrictive covenants on remaining business.

**GE Capital**
Global Energy

Energy Investment Solutions

The Selected Product is:

High Yield Debt

GE Capital Global Energy invests in high yield debt opportunities around the world. Investments are either negotiated directly, institutional private placements or bank syndications.

Investment structures involve senior secured transactions or may involve subordinated investments with appropriate equity participation.

Typical debt investments for GE Global Energy involve acquisitions, project financings and the refinancing of existing investments.

Debt can be structured in a variety of ways including as a revolving credit line or term debt. IT can be a secured or an unsecured loan and can be based on floating or fixed rate.

The off-balance sheet loan ("OBSL") is a debt financing which may qualify as an "operating lease" for accounting purposes, with the client retaining tax ownership. OBSL typically provides 5-12 years off-balance sheet financing priced at a slight premium over the client's unsecured debt rate.

US tax exempt debt is a highly developed product in which the interest on qualifying securities is exempt from federal income taxation pursuant to Section 103 of the Internal Revenue Code.

GE Capital
Global Energy

Energy Investment Solutions

The Selected Product is:

Leasing Product

GE Capital Global Energy is highly experienced in all forms of lease investing.

In the United States, we typically structure leveraged leases or single investor leases. We also structure cross-border lease transactions, and structures in which assist clients to monetize assets already on balance sheet through a sale and leaseback to the owner.

Leasing may be an option if the client is concerned about credit implications and/or S&P or Moodys' debt ratings and is therefore interested in off-balance sheet accounting treatment to improve leverage and ROA.

Single Investor Lease ("SIL") and Leveraged Leases ("LL") are tax advantaged, asset based financings which typically qualify as "operating leases" for accounting and "true leases" for tax purposes. Depending on the client's tax position, the SIL and LL can provide 7-30 years off-balance sheet financing priced well below the client's alternative borrowing rate.

**GE Capital**
Global Energy

Energy Investment Solutions

The Selected Product is:

Limited Partnership

Our limited Partnerships are extremely flexible, and are suitable for project financings, deconsolidations, acquisitions and refinancings or monetizations of existing assets. They can be asset-based, non-recourse and/or off-balance sheet to meet client objectives.

Limited Partnership financing is an efficient vehicle as it may permit returns to be earned through accounting benefits and cash distributions in a tax efficient manner.

GE Capital Global Energy invests through limited partner equity or preferred limited partner equity, with distributions geared to targeted rates of return. Ownership interests also can be structured to duration of term and residual value.

Depending on the assets and ownership it may be possible to record an accounting gain without such gain being subject to current income tax.

GE Capital Global Energy is willing to discuss a reduced return after-tax and a smaller residual position/upside sharing position in exchange for preference in cash distributions to the other partner(s) and a fixed and determinable payment stream to allow us to account for the investment as a receivable.

**GE Capital**
Global Energy

Energy Investment Solutions

The Selected Product is:

Private Equity

GE Capital Global Energy invests in a variety of private equity situations, focusing on early round fundings for companies pursuing potentially high growth, game changing energy technologies and services.

Our clients benefit from our extensive corporate heritage in the energy industry as well as industry leading in-house corporate R&D expertise.

GE Capital Global Energy also actively considers private equity opportunities in acquisition, M&A and recapitalization situations.

Typically, we are looking for an investment size between \$5MM and \$50MM but are willing to consider larger investments. We are predominantly minority investors in high-quality private companies, but will also make investments in publicly traded companies.

Regardless of their size or industry, all of our portfolio companies possess solid management with established products or services.

Our investments include the use of preferred stock, convertible debt, subordinated debt, and common stock.

FIG. 14

280

**GE Capital
Global Energy**

Energy Investment Solutions

The Selected Product is:

Preferred Equity

GE Capital Global Energy invests in a variety of transactions, including private equity and 144A offerings.

Preferred equity investments structured by GE Capital Global Energy are applicable in project financings, acquisitions and refinancing / monetizations, and may include a variety of balance sheet benefits.

Preferred equity is a financing which is senior to common equity stockholders and junior to all lenders and trade creditors. It is debt-like in terms of providing a fixed rate of return to the preferred equity purchaser and generally containing a redemption mechanism. Click on the link below for descriptions of other structures.

Depending on the structure, a portion or all of an investment may be treated as equity by the regulatory agencies and rating agencies.

Project Equity Valuation Tool

This project equity valuation tool is provided for information purposes only, and should not be construed as an offer of, or a refusal to offer, any product or service. None of the information you provide into this tool will be saved or used by GE.

Please fill in the following information to receive an online preliminary valuation of the equity in your assets. When entering data, please keep in mind that these rules apply:

- All numbers, except escalators, must be positive.
- Limit two decimal places to the right.

Step One: Enter Preliminary Data

Complete the information requested below:

Size of Plant	<input type="text"/>	MW
Heat Rate	<input type="text"/>	MMBtu/kWh
% of Revenues under contract	<input type="text" value="00.00"/>	%
# of Years Remaining under contract	<input type="text"/>	Years
Remaining Term of Debt	<input type="text"/>	Years

Step Two: Enter Your Current Financing Information (two options)

Please complete either A or B:

☒ A

Outstanding Principal	<input type="text"/>	\$MM
Interest Rate	<input type="text"/>	%

OR

☐ B For more a more accurate calculation, input your debt principal and interest service:

Step Three: Enter Your Projected Electricity Prices (two options)

Please complete either A or B:

☒ A

Electricity Prices (2000)	<input type="text" value="0.00"/>	c/kWh	<input type="checkbox"/> Check to use default values
Escalator (annual rate of increase)	<input type="text" value="0.00"/>	%	

OR

☐ B For more a more accurate calculation, input your electricity prices projections:

16/18

Step Four: Enter Your Projected Fuel Costs (two options)

Please complete either A or B:

☒ **A** Fuel Costs (2000) ☐ Check to use
\$ /Mmbtu default values
Escalator (annual rate of increase) %

OR

☐ **B** For more a more accurate calculation, input your fuel prices projections:

Calculator Results

Thank you for using the GE Structured Finance Energy Investment Solution Tool.

Based upon your input, a preliminary estimated value of 50% equity stream from this asset in %MM is:

\$341.6 MM to \$729.3 MM

On this version of the Energy Investment Solution Tool, no residual value assumption has been made, or optimization for accounting purposes, therefore, a more thorough valuation of the equity stream from these assets could yield a higher valuation.
